Trend[®] and Smoke Control announces the worlds first fully integrated Flame Zone Window and Door System.

Xtreme[®] Bushfire Windows and Doors range is now compliant to full Flame Zone Section 9 - AS3959-2009 and AS1530.8.2-2007 - Construction of buildings in bushfire-prone areas.

Trend Windows & Doors Pty Ltd and Smoke Control Pty Ltd announces that the Xtreme[®] range of Bushfire Window and Door products combined with Windowshield Fire Curtains have recently been assessed to full Flame Zone BAL FZ to comply to the highest level in the new Bushfire Construction standards **(AS3959-2009 and AS1530.8.2 -2007)**.

In a major breakthrough, the new system which will be called Xtreme[®] Flame Zone windows and doors System has been assessed by CSIRO to pass the standard test at the absolute extreme BAL FZ level.

The System which combines Trend® technologically advanced CSIRO tested BAL 40 (1530.8.1-2007) Xtreme® Window and Door system with Pyro-Protect® seals and glazing systems and standard 5mm or 6mm toughened glass integrated with the Smoke Control CSIRO tested (1530.4) Windowshield Fire Curtain to produce the Xtreme® Flame Zone Bushfire System.

This latest development is a result of Trend Windows & Doors® ongoing intensive research and development and extensive testing with the CSIRO over the past 5 years, aimed at developing cost affordable window and door systems which will withstand the absolute extremes of bushfire attack.

Trend Windows® Xtreme® Window and Door products, the world's first products tested and passed by the CSIRO under the previous standard in 2005, went on to become the clear market leader in bushfire windows and doors. Xtreme® Windows and Doors were the first window and door products tested to BAL 40 (1530.8.1-2007) at the CSIRO Laboratories testing facility at North Ryde in Sydney, which has been set up specifically to test building products to the new Bushfire standard.

Smoke Control is a market leader in their industry sector for fire and smoke control within buildings. Their extensive experience with fire protection and Fire Engineering has brought them together with Trend® to form this unique and world first innovation.
